**Abstract:** This article provides comments on the strategy of innovation and economic development of the region, and industrial enterprises of the region annually invest in the development and modernization of their production capacities, the development and modernization of information technologies as the main factors of production development.

**Keywords:** Innovative economic development, strategy, industrial enterprises, modernization, production, regional development.

The depth of the problems of innovative development of the regions discussed in our country today requires the use of all available opportunities to quickly eliminate them. Undoubtedly, it is impossible to achieve the goals set before us without scientifically based tools of strategic management. In the current conditions of increasing the independence of the region, the problem of studying the financial potential is becoming more and more urgent. The problem of financial stability of the region does not lose its relevance throughout the entire process of development of socio-political and economic relations of any country. This is especially true for countries undergoing global transformation processes.

In recent years, rapid development in various fields has been observed in our country. The word "new Uzbekistan" has already entered the people. It encourages people to develop and innovate. In this regard, for the financial and economic development of the region, it is necessary to develop a mechanism for supporting the region from a national point of view.

Concepts of regional and local economic policy are closely related to the concept of "regional development". VN Lexin and AN Shvetsov understand this as "such a mode of operation of the regional system aimed at positive dynamics of parameters of the level and quality of life." Reproduction of the social, economic, resource and ecological potentials of the population, stable, balanced territory without mutual destruction". At the same time, the concepts "territory" and "regional system" are considered synonymous by them. Under the territory, the authors define a certain part of the social, natural, economic, infrastructural, cultural and historical and spatial potential of the state under the jurisdiction of

sub-federal or local authorities.

We are close to such an approach in determining the nature of regional and territorial development. In this case, "Regulation of regional development should be understood as specially organized systematic actions to ensure stable and balanced functioning of regional systems.

The main goal is to improve the standard of living of the population and increase its quality. Such regulation refers to the mandatory functions of any state. As stated by DA Tatarkin, EN Sidorova and OA Kozlov, "The construction of an effective model of economic development should be based on the global trend aimed at the formation of stable socially oriented self-developing regional systems that create conditions for social stability and economic well-being of the population."

We agree with O. Vnin Kuznetsova's opinion that "ideas of "adapters" are most acceptable for the new Uzbekistan."

In our opinion, reflecting the ideas of those who adapt to the level of regulation, we can conclude that this approach is appropriate in regulating the development of local authorities located in the region and its territory.

At the same time, SD Valentey says: "National regional policy should be based on determining the specific factors of growth or development of the economy of certain subjects of the region."

In the study of policies at different levels of governance, carried out by TV Gritsyuk, great attention is paid to the management of regional development. The author offers a strategic approach to the modeling of regional development processes, fiscal regulation of relations between the center and regions, and modeling of regional fiscal behavior.

OV Kuznetsova understands it as "actions of the central authority, the purpose of which is to selectively influence the economic development of individual regions" describing the state regulation of the economic development of the regions.

It should be noted that the concept of "territorial development regulation" is somewhat broader than the concept of state regulation of the economic development of regions, although it is semantically close.

Taking into account that the article examines the cooperation of regional and local authorities in the process of regional development regulation, we believe that it is necessary to pay some attention to the theories that are the basis for understanding the institution of self-government. The essence of the institution of local self-government is the self-organization of the population,

which in essence allows connecting local self-government to the events of community life. On the one hand, local self-government provides public services closer to the population, on the other hand, it provides for the development of citizens' independence, self-management and stability of society and the state.

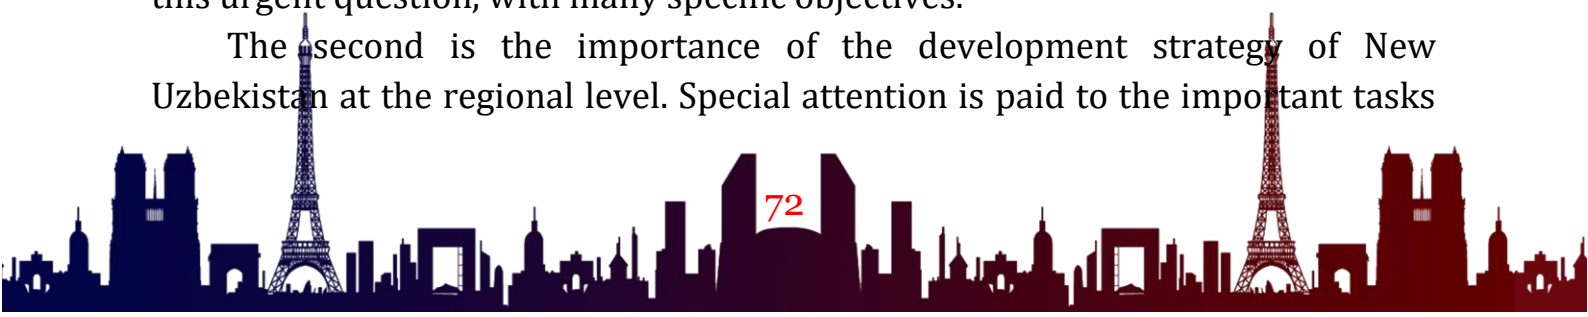

In order to develop a strategy for the development of the financial and economic power of the industrial sectors of the regions of Uzbekistan and the economy of our country in general, it is necessary to adjust the tactics of strategizing based on the factors of the external and internal environment.

It is not for nothing that the Action Strategy on the five priority directions of the development of the Republic of Uzbekistan in 2017-2021 was developed at the initiative of the President of the Republic of Uzbekistan Shavkat Mirziyoyev.

A completely new national legal system is being formed in new Uzbekistan. That is, the principle that "Man, his rights, freedoms, especially his value is the most important value" is recognized. The most important thing: the "state-society-man" principle, which has been in effect for years in the development strategy of the new Uzbekistan, is being changed to the "man-society-state" principle.

When talking about the meaning and essence of the development strategy of New Uzbekistan, it is necessary to highlight its historical importance, which is manifested in the following three levels. The first is the importance of the New Uzbekistan development strategy at the national level. A comprehensive analysis of the priorities and most important tasks defined in the development strategy shows that a completely new national legal system is being formed in the new Uzbekistan. That is, the principle that "A person, his rights, freedoms, especially his value is the highest value" is recognized. In the new development strategy of Uzbekistan, the principle of "state - society - man" that has been in effect for years is being changed to the principle of "man - society - state". To put it more simply, Uzbekistan emphasizes the need to increase the value and welfare of every citizen. Most importantly, the main idea of the 7 priorities in the development strategy of New Uzbekistan is to ensure human dignity. Because- The main idea of the President's pre-election program was the principle "For human dignity". How to implement legal and organizational-legal ways to restore human dignity in all spheres of our life at national, regional and international cooperation levels? Development strategy has practical answers to this urgent question, with many specific objectives.

The second is the importance of the development strategy of New Uzbekistan at the regional level. Special attention is paid to the important tasks

of valuing close brotherhood among the peoples of Central Asia, strengthening beneficial cooperation with neighboring countries, and achieving regional security and sustainable development. The third is the importance of the development strategy of New Uzbekistan at the international (global) level.

"New Uzbekistan - a new worldview" spiritual and educational promotion events are being organized. A 7-direction working group of the Republican headquarters was formed to organize the work of conveying the essence and importance of the reforms implemented in our country to the general public in the neighborhoods. They were assigned tasks such as organizing and coordinating the activities of propaganda groups, preparing and delivering propaganda materials, systematically carrying out propaganda work in neighborhoods by higher education institutions.

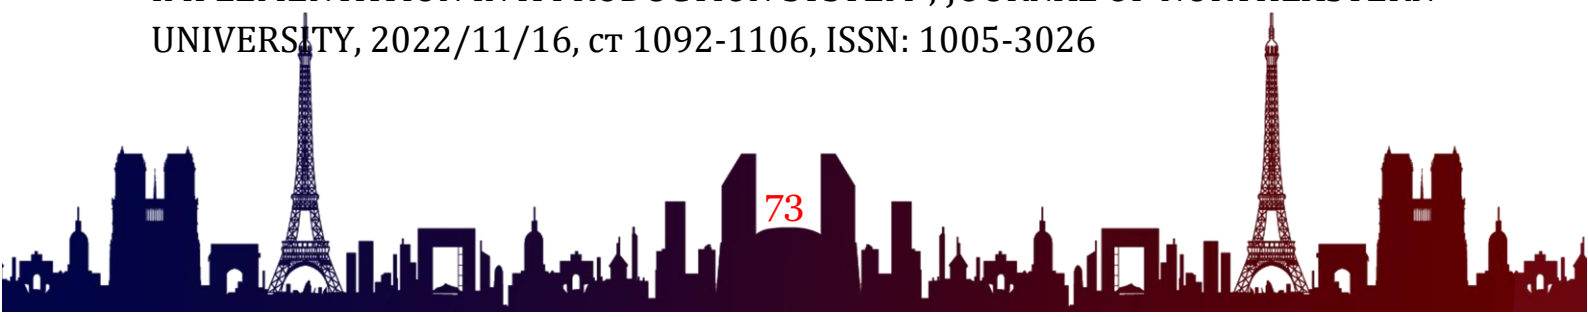

For this, it will be necessary to attract foreign investments, enter the market of large multinational corporations, involve local enterprises in the process of forming a global value chain.

The versatility, complexity, and undoubted importance of the process of increasing the effectiveness of the use of the financial and economic potential of the regions, the implementation of research aimed at analyzing the potential from the point of view of a systematic approach is an urgent issue of today. This is considered a potential local market, and understanding their interests and desires will require a rational use in practice of the development of the financial and economic environment or the formation of network investment programs and even specific investment projects.

The region is currently a system consisting of complex elements that make it up. The increasing responsibility of the region is the result of the decentralization of the powers of state authorities, and the development of a methodology for managing the mutual cooperation of regional entities aimed at increasing the efficiency of using its financial and economic opportunities is now considered an objective necessity, and the formation of market relations is a social factor in the development of regions. - led to an increase in economic asymmetry and the need for a balanced regional financial policy.
